

Ginger is hiring 100 environmental and construction engineers and technicians

PARIS, 26 July 2017 – To meet its very strong business growth, Groupe Ginger plans to create around a hundred new jobs by end 2017 throughout France. This recruitment drive involves all positions of the Group’s business: engineers, technicians, support roles, management positions, overseas assignments, etc.

Two activity poles are involved: construction, via its Ginger CEBTP subsidiary and environment, via its BURGEAP subsidiary. Positions related to geotechnical aspects, to polluted sites and soils, hydrogeology, asbestos project management, the study of materials, the study of structures and hydraulics are all concerned. From one perspective, the economic recovery of the construction and public works sector inspires numerous new projects which require new talents. From another perspective, growing environmental awareness as regards new constructions and the rehabilitation of existing heritage is a catalyst for expanding business.

In addition to these external factor, by implementing these synergy drivers across all its activities (some twenty subsidiaries), Ginger Group has managed to gain an attractive position for itself, which appeals to its clients and which ensures that it can now generate new markets. As a reminder, the Group which currently makes an annual turnover of 160 million euros aims to reach 200 million euros by 2020. Ginger plays a key role in major projects like Grand Paris, the new coastal road on Reunion Island as well as providing advice for a sustainable district in Abidjan, Côte d’Ivoire.

“We can see that 2017 is a year where there has been real economic recovery with numerous projects across all our sites. This is why it is important for us to attract new talents to the Group and, at the same time, to capitalize on our human assets which underlie Ginger’s success: technique, autonomy and a sense of initiative”. Philippe Margarit, Ginger Group CEO.

About Ginger Group

Ginger is the French leader of recommendation engineering. Specialized in soils, water, material, works and environmental engineering, the Group has ambition to become the major player for construction, sustainable cities, and industrials.

The Ginger’s skills are built on a perfect technical control on several fields as geotechnics, polluted soils and sites, material health and water.
